ENGINEERED FOR TODAY'S
TECHNOLOGIES

FluoroExtreme™ MS-4130DA; MS-4010DA

FluoroExtreme™ are fluorinated synthetic lubricants specially formulated for dental handpieces. These lubricants offer superior protection, lubricity, and chemical stability versus hydrocarbon-based alternatives. Minimizes mechanical wear in all low and high speed handpieces, allowing devices to run longer and efficiently without costly repairs. The aerosol packaging contains low surface tension solvents to carry our lubricant into the tight crevices of dental handpieces, getting critical lubrication to areas which require it.

FluoroExtreme™ is 100% biocompatible (ISO 10993) and Nonflammable.

Miller-Stephenson strongly recommends the use of MS-255DA, our surface PrepClean™ to remove all previous lubrication and debris prior to first application.

Advantages:

- Minimizes mechanical wear and friction
- Extends service life of dental devices
- Chemical and thermal stability
- Oxygen compatible
- Contains no hydrocarbon oils or propellants
- Wide temperature range (-94°F to 550°F)

Additional lubricants are available through Miller-Stephenson to meet a wide range of application requirements.
